

STEVEN DORIS

SENIOR FULL-STACK / PLATFORM ENGINEER

McHenry, IL • (847) 964-0127 • stevendoris@gmail.com
github.com/Dorbii • linkedin.com/in/stevendoris

Senior Software Engineer focused on full-stack internal platforms that sit between engineering workflows, data systems, automation, and AI-assisted tooling. Experienced in turning ambiguous operational problems into reliable backend services, usable product interfaces, and trusted reporting systems.

APPLICATION DEVELOPMENT

Go · TypeScript · React · TanStack
C# · Python · PostgreSQL · Redis

INFRASTRUCTURE & DATA

AWS · Databricks · Docker
VMware · MacStadium

APIS & INTEGRATION

gRPC/REST · OpenAPI/Swagger
MCP · Capability contracts · Tool generation

Experience

NinjaOne, Austin, TX

May 2025 - Present

Senior Software Engineer: Internal Tools & Development

- Architected and built a self-service VM provisioning platform across AWS, VMware, and MacStadium, enabling QA and engineering teams to create and manage cross-platform test environments.
- Built the orchestration layer for long-running VM lifecycle workflows, including checkout state, provisioning transitions, retries, backend service coordination, and operational status tracking.
- Expanded Kaizen Metrics into a contract-driven reporting platform with Databricks sync across 500+ Bitbucket repositories, schema validation, and identity resolution for engineering dashboards and repository-level reporting.
- Integrated an AWS Bedrock-powered assistant into Kaizen Metrics, enabling natural-language access to engineering metrics and reporting workflows.
- Built Kaizen's internal MCP service for AI coding agents, generating tool definitions from capability contracts and OpenAPI/Swagger schemas instead of hand-maintaining agent tools.
- Implemented the MCP forwarding and safety layer, mapping agent tool calls to existing backend HTTP services with JWT pass-through, role-filtered tool discovery, request correlation, sanitized errors, audit events, telemetry, and Redis-backed idempotency for write retries.

Tanium, Kirkland, WA

June 2020 - April 2025

Software Engineer: Internal Tools & Development

- Refactored Tanium Risk Assessment tooling for customer-facing endpoint risk reports, cutting runtime by 8+ hours and reducing report size 4x.
- Built a native Go Jaro-Winkler matching module for end-of-life software detection across inconsistent endpoint inventory data.
- Automated UAT workflows with a custom C# application, reducing manual effort from 4 FTEs to 1 and cutting execution time from one week to one hour.
- Built and led development of document migration tooling in React and Electron, automating conversion workflows and reducing effort by roughly one week per two documents.

Column Technologies, Lombard, IL

July 2018 - June 2020

DevOps Architect & Team Lead

- Architected high-availability and failover infrastructure for Atlassian Data Center environments.
- Led automation and CI/CD improvements, including containerization and automated deployment workflows across the Atlassian stack.
- Developed platform-level automation tools and scripts, improving operational efficiency and system reliability.

ACE Hardware, Oakbrook, IL

May 2017 - June 2018

Associate Software Engineer - Informatica development, onboarding support, and enterprise automation initiatives.

C.A.I.T., Macomb, IL

August 2014 - May 2017

Network and Systems Administrator - systems administration, networking, and infrastructure support.

Education

Western Illinois University

2014 - 2017

B.S. Computer Science
